Suds2Go, the first dual-purpose water bottle that allows you to both hydrate and wash your hands on the go. Its patented design includes a reusable container you can refill with your favorite foaming soap, a pump, and separate valves for drinking and rinsing to avoid contamination.

Suds2Go was founded by Arizona native and ASU alumni Gabe Trevizo, father of four young kids, who came up with the breakthrough idea during a, particularly bad flu season. After receiving a patent for the bottle, he and his wife launched Suds2Go.
