Loosing weight is a feat in and of itself, but oftentimes the downside of extensive fat loss is loose, listless skin.

Now, the latest innovative technology from Fresh Start MedSpa is making it possible to simultaneously eliminate stubborn fat while tightening the skin around the area of fat loss for a completely rejuvenated and refreshed look.

Heather Rio of Fresh Start MedSpa created [Fusion Contouring™](#), a non-evasive treatment that combines two effective non-surgical procedures: CoolSculpting® to reduce fat and radio frequency to tighten the skin where the reduction took place. The two treatments combined through Fusion Contouring™ give you optimum and long lasting results.

CoolSculpting® is the only FDA-cleared, non-surgical fat reduction treatment that uses a controlled cooling device to freeze, destroy and eliminate stubborn fat that resists all efforts through diet and exercise by up to 30 percent.

Using CoolSculpting® technology and (MP)² Technology to stimulate dermal collagen production to tighten skin, Fusion Contouring™ uses an innovative synthesis of magnetic pulse and radio frequency (RF) to deliver superior results for the areas where fat was reduced.

That means no needles, no incisions and no downtime – you can go on about your day as usual right after treatment and look forward to immediate results with long term change in fat reduction, skin texture and quality.

The benefits of Benefits of Fusion Contouring™ include: ·

- Non-invasive
- Pain-free treatment
- No numbing required
- No downtime
- Safe, comfortable and convenient
- Both treatments are clinically proven and FDA-approved
