EXTRA EXTRA!

Have you seen people making weird faces into their phones lately? We are all guilty of secretly using our phones as mirrors but now with App, Snapchat you may be more likely to see people getting creative with their facial expressions. Snapchat is a fast and easy way to send pictures to your friends apparently Facebook, Twitter, and Instagram aren't enough. Snapchat brings something NEW to the "sharing" game. It is having a conversation with pictures. The pictures are timed, and you can add a caption and draw on them. The catch is, you can only see the pictures when you first open them.

So SNAP away!
